

WORKSHEET 3 SQL

Refer the following ERD and answer all the questions in this worksheet. You have to write the queries using mysql for the required Operation.

- **Customers:** stores customer's data
- **Products:** stores a list of scale model cars.
- **ProductLines:** stores a list of product line categories.
- **Orders:** stores sales orders placed by customers.
- **OrderDetails:** stores sales order line items for each sales order.
- **Payments:** stores payments made by customers based on their accounts.
- **Employees:** stores all employee information as well as the organization structure such as who reports to whom.
- **Offices:** stores sales office data.

1. Write SQL query to create table **Customers**.

```
create table customers (  
customerName varchar(20) not null,  
contactFirstName varchar(20),  
contactLastName varchar(25),  
customersNumber varchar(300) not null,  
phone int(10) not null,  
addressLine1 varchar(500) not null,  
addressLine2 varchar(200) not null,  
city varchar(20) not null,  
state varchar(20) not null,  
postalCode int(11) not null,  
country varchar(30) not null,  
salesRepEmployeeNumber int(200) not null,  
creditLimit int(200) not null,  
PRIMARY KEY (CustomerNumber)  
);
```

2. Write SQL query to create table **Orders**.

```
create table orders (  
orderNumber int PRIMARY KEY NOT NULL,  
orderDate DATE ,  
requiredDate DATE,  
shippedDate DATE,  
status varchar(20),  
comments text ,  
customersNumber int  
);
```

3. Write SQL query to show all the columns data from the **Orders** Table.

```
select * from orders;
```

4. Write SQL query to show all the comments from the **Orders** Table.

select comments from orders;

5. Write a SQL query to show orderDate and Total number of orders placed on that date, from **Orders** table.

select orderDate ,count(*) as Total_number_of_orders from orders GROUP BY orderDate;

6. Write a SQL query to show employeeNumber, lastName, firstName of all the employees from **employees** table.

select employeesNumber,lastName,firstName from employees;

7. Write a SQL query to show all orderNumber, customerName of the person who placed the respective order.

select orders.orderNumber ,customers.customerName from customers INNER JOIN orders ON
orders.customersNumber = customers.customersNumber ;

8. Write a SQL query to show name of all the customers in one column and salerepemployee name in another column.

select customers.customerName ,employees.firstName as salerepemployee from employees INNER
JOIN customers ON customers.salesRepEmployeeNumber = employeesNumber;

9. Write a SQL query to show Date in one column and total payment amount of the payments made on that date from the **payments** table.

select paymentDate,sum(amount) from payments GROUP BY paymentDate ;

10. Write a SQL query to show all the products productName, MSRP, productDescription from the **products** table.

select productName, MSRP, productDescription from products;

11. Write a SQL query to print the productName, productDescription of the most ordered product.

```
select productName, productDescription, count(productName) from products GROUP BY productCode
limit 1;
```

12. Write a SQL query to print the city name where maximum number of orders were placed.

```
Select city from customers (where (max (group by (select oderdetails.quantityorder from join
customers.customerNumber= orders.customerNumber where(select orderNumber,quantityorder from
orderdetails )))))
```

13. Write a SQL query to get the name of the state having maximum number of customers.

```
select state ,count(state) from customers GROUP BY state limit 1;
```

14. Write a SQL query to print the employee number in one column and Full name of the employee in the second column for all the employees.

```
select concat(firstName,lastName) as Full_Name,employeesNumber from employees;
```

15. Write a SQL query to print the orderNumber, customer Name and total amount paid by the customer for that order (quantityOrdered × priceEach).

```
select orders.orderNumber ,payments.amount ,customers.customerName from
orders,payments,customers where payments.customersNumber = customers.customersNumber and
customers.customersNumber = 3 orders.customersNumber ;
```
